

FIBERRUNNER® ROUTING SYSTEMS

Panduit provides innovative solutions for routing fiber optic and high performance copper cabling to and between equipment racks within a data center, telecommunications room, or service provider facility. Routing products such as the FiberRunner® Routing System are critical factors in your ability to quickly install, easily implement moves, adds, and changes, and maintain the integrity of your fiber and copper cabling plant in order to maximize long-term performance.

- Robust, large capacity 24x4, 12x4, and 6x4 systems to handle large cable counts; 4x4 and 2x2 systems for use with smaller cable counts
- Hinged channel cover and split fitting covers for 12x4, 6x4, and 4x4 systems protect cabling and provide easy access for future cabling revisions and additions
- QuikLock™ assembly features eliminate or minimize the need for tools to assemble the system; QuikLock™ Couplers and Brackets require less than five seconds to mechanically secure components
- 12x4, 6x4, 4x4, and 2x2 fittings provide minimum 2" (50.8mm) bend radius and 24x4 fittings provide 3" (76.2mm) bend radius to protect against signal loss due to excessive cable bends
- Multiple spillout options provide versatility to make transitions to various equipment and rack configurations
- Compatible with Panduit® Fiber-Duct™ 4x4 and 2x2 Routing Systems, CabRunner® and Wyr-Grid® Overhead Routing Systems, cable management, and racks

The FiberRunner® 24x4, 12x4, 6x4, 4x4, and 2x2 Routing Systems are comprised of channel, couplers, fittings, and brackets designed to segregate, route, and protect fiber optic and high performance copper cabling.

As part of the Panduit Data Center Solution, FiberRunner® Routing Systems offers secure, reliable system integration and risk management within the physical infrastructure.

GRIDRUNNER™ UNDERFLOOR CABLE ROUTING SYSTEM

Panduit provides an end-to-end solution for the physical layer infrastructure. The GridRunner™ Underfloor Cable Routing System is a high capacity, versatile, underfloor cable pathway. It is designed to route and manage copper cables, fiber optic trunk cables, and power cables beneath a raised floor system within data centers and service provider facilities.

- Drop-in wire baskets are supplied in either 24" (600mm) or 48" (1200 mm) nominal lengths and require no cutting or deburring of sharp edges
- Drop-in wire baskets display all rounded edges, eliminating the opportunity for cables to get damaged during the initial installation and preventing risk of injury to the installer
- Pedestal bracket allows fast installation to raised floor pedestals (both round and square tube) with the use of a single tool and a single captured fastener
- Pedestal bracket allows for infinite height adjustability during installation
- Universal intersection component eliminates the need to field fabricate directional changes speeding specification and implementation
- Snap-in bend radius sidewalls provide bend radius control and are easily attached to the wire basket pathway
- Unique, adjustable, level change component allows the fast installation of vertical rises and descents without field modification or specification of special fittings
- Integral bonding feature of the GridRunner™ System ensures that all components are electrically bonded to each other as they are installed

The GridRunner™ Underfloor Cable Routing System ensures maximum network reliability and reduced cost of ownership. Robust, highly engineered components provide a strong pathway that supports maximum cable capacity over the lifetime of the data center, providing optimum cable protection and assuring network performance. Fast and easy to deploy, this scalable underfloor cable pathway solution reduces installation costs and speeds implementation of new services.

As part of the Panduit Data Center Solution, GridRunner™ Underfloor Cabling Routing System offers secure, reliable system integration and risk management within the physical infrastructure.
